

The unique design of the Supreme allows for both assisted and independent living.

The Supreme can be a strong selling feature when people are deciding which facility to choose for themselves or their loved ones.

Dignity and independence as well as ease of operation and functionality make the Supreme stand out as the best option for any facility that serves people with limited mobility.

Controls conveniently located on our custom control tower:

- Convenient and practical for the caregiver
- Safe for the bather

# SAFETY *Bath*

## Supreme

## The SUPREME

Safety Bath Inc. has designed The Supreme walk in bathtub to fill the void between a regular household bathtub & an institutional lift tub for the group home/assisted living market.

In keeping with the trend to provide more home-like settings in care facilities, Safety Bath Inc. provides a bathtub that is less threatening than a lift bathtub and can be used by those who still have some ambulatory ability.

### FEATURES:

- **The Supreme costs less** than a lift tub and is less expensive to operate.
- **Hygienic San Air Whirlpool System** allows air to flow into the tub but does not allow bath water to back up into the jets. The San Air System addresses concerns regarding bacterial infection when multiple users access the same bathtub.
- **Multiple jet system** for greater therapeutic value, blows heated air through the jets as opposed to pumping water through pipes.
- **5 minute hot air purge** removes any moisture at whirlpool jet tips 2 minutes after it detects that the bathtub has been drained.

- **5 minute purging cycle** activated once every 24 hours at a pre-set time.
- **Cleaning system** - sanitizes surfaces after use with a retractable cleaning solution wand and uses less chemical than conventional institutional lift tubs.
- **Seat Warmer** provides a warm surface upon entering the bath.
- **Compact size** - 33.5"W x 29.5"H x 40.5"L looks less industrialized and more familiar to the user and reduces fill and drain time.
- **Walk in bathtub with an outward swing door** - allows greater individual independence for those able to bathe with limited supervision and provides for emergency exit.

### THE SUPREME ALSO COMES COMPLETE WITH:

- External safety drain
  - Hand-held shower
  - Pop-up waste drain with overflow
  - Temperature control valve
  - Cascading tub filler
  - Built-in grab bar in the door
  - Molded seat and back for maximum support
  - Security latch
  - Back-flow preventer
- **Optional lift can be used if needed.**

### CAREGIVERS APPLAUD THE SUPREME

"The outward door swing makes emergency access possible."

"There are fewer caregiver injuries due to reaching and lifting. The client is within easy reach at all times."

"The client can maintain dignity. The tub obscures the caregiver's line of sight. The client feels more comfortable."

"Fill and drain times are reduced, allowing more baths per day per unit."

"No lifting is required if the client is ambulatory."

"Clients feel they are contributing to their own self care."

*"We purchased our first Safety Bath in 1995. Since then we have installed Safety Bath in several of our facilities and will continue to do so. The tub fits well into group home situations. Clients and staff find it beneficial and user-friendly."*
